

## Finally, an Intelligent Solution

**PowerAnalytics** is the complete platform for real-time dashboards, budgeting, planning, forecasting, predictive analytics, KPIs, compliance and consolidations for SAP Business One.

Until now, Corporate Performance Management, Business Intelligence and Consolidation solutions were available only with huge price tags and only to the largest customers. PowerAnalytics provides user-friendly enterprise-quality solutions to organizations of every size at a very smart total cost of ownership. PowerAnalytics makes Fortune 1000 features and capabilities accessible to everyone that uses SAP Business One.

The PowerAnalytics standalone application allows users to create unlimited reports and perform Business Intelligence analysis through the familiar Excel spreadsheet. PowerAnalytics directly addresses the need for advanced, easy-to-create reports—by Account, Division, Region, Department, etc. Beyond flexible reporting, users can access the data they need for planning, analysis and multi-company consolidations, allowing unlimited cubes, members and dimensions.

**PowerAnalytics** is a standalone, out-of-box solution that empowers users by dynamically mapping to SAP Business One for the automatic creation of cubes from the general ledger. The per-user price of \$595 makes this powerful solution accessible to even the smallest firm. For customers, this represents the fastest, most cost-effective way to implement dynamic online reporting, analysis and planning solutions from SAP Business One. Designed specifically for SAP Business One, PowerAnalytics enables companies to create unlimited standard and ad hoc reports, as well as business analyses, including for KPIs and multi-company consolidations. User access is via the everyday spreadsheet, but now with a sophisticated, agile business intelligence component. The stand-alone is neither an SME nor a limited-capability version; it provides

- Multi-Company Consolidations
- Strategic Planning
- Maximizing Profitability
- Budgeting and Forecasting
- Integrating External Data
- Dashboards, KPIs and Reports
- Predictive Analytics

full functionality and accommodates an unlimited multidimensional OLAP architecture, to which new meta data logic—for example, for KPIs or forecast scenarios—can be added as easily as typing in an Excel formula or inserting a row. PowerAnalytics also provides advanced, online planning, budgeting and forecasting, to direct a company toward future success.

We guarantee a 32% improvement in productivity on a task-for-task basis.\* Instant access to better information and improved planning and forecasting capabilities will enable you to significantly increase revenues and profitability.

## *Now that's Intelligent.*

**PowerAnalytics** standalone brings enterprise-quality, user-friendly solutions to the small-to-medium market that SAP is serving with SAP Business One. Mapping to the General Ledger in SAP Business One is automated, allowing the immediate generation of multidimensional cubes of previously static relational data. PowerAnalytics directly addresses the need for advanced, yet easy-to-create reports—by Account, Division, Region, Department, etc.—and the need for planning, analysis and multi-company consolidations.

Once the data is in cubes, PowerAnalytics users are able to manage data intuitively with a logic that is familiar to Excel users. Building or altering a model can be accomplished quickly, with end-user (not strictly IT) skills. All manner of internal formulas are available for sophisticated calculations—it has never been easier to create new company metrics and analytics. With drag-and-drop, double-click speed, users create virtually any cross-dimensional perspective, or Slice, of data. There is no end to the reports that users can create, with outstanding graphics available via a few key strokes.

**PowerAnalytics** natively adopts the Excel spreadsheet as a front end, so with the click of a button any Slice can be viewed through Excel; any report containing literally thousands of cross-data views can be saved as a single, simple Excel file; and any file can make full use of all of Excel's formatting and graphical capabilities. From Excel, users can also enter data through the familiar spreadsheet interface to test "what if" analytical scenarios. Note that all data is stored within the cube(s), not Excel; spreadsheets created via PowerOLAP (the engine that runs PowerAnalytics) maintain a dynamic connection to source cubes, retaining their standard Excel formula, formatting and graphical capabilities. PowerOLAP is the very definition of "Excel-Friendly" OLAP!

### **Want to take the PowerAnalytics Solution beyond a standalone?**

With the PowerOLAP Professional Suite, companies have all the benefits of the PowerAnalytics standalone solution plus an advanced Server, multi-user functionality, and the ability to integrate data from other data sources.

**PowerOLAP Professional Suite** takes PowerAnalytics innovations to full throttle. A fully empowered PowerOLAP system delivers solutions far beyond the standalone version for advanced functionality and connectivity to SAP. In addition to all the capabilities of the standalone, the Professional Suite adds expanded Server and multi-user capabilities including the PowerOLAP MDB Server, comprehensive user- and group-based security, OLAP Exchange connectivity to ODBC data sources, a Web Server, and the optional Leonardo® ActiveX control, which allows users to work with live data in Microsoft® Word, PowerPoint®, FrontPage®, and other Windows applications. The Professional Suite also empowers optional Portal Server capability, which provides for HTTP and XML connectivity, including Crystal Xcelsius for outstanding Flash file dashboard graphics.
